

PUMA[®] IS EXPANDING ITS TERRITORY

PUMA's toughest roofing technology
now available in two formulas

PUMA One-Coat

The original patented PUMA FAST single-coat formula designed for use over foam applications

PUMA XL^{*}

The new PUMA formula that brings PUMA TOUGH Technology to all roofing applications

*PUMA XL is exclusive to approved contractors.

Capture New Business Territory with the PUMA® Family of Products

PUMA innovation taken to a new level.

Developed by Conklin's Research and Development group, PUMA (Poly-Urethane Modified Acrylic) is Conklin's premium roof coating. It combines the best performance of urethane and acrylic polymers to create a seamless membrane. PUMA is tougher and more durable than conventional acrylic roof coatings; it has outstanding tensile strength, giving the roof both long-term flexibility and resistance to deterioration. Its superior resistance to dirt pickup and mildew keeps roofs looking new and customers happy for years.

PUMA XL is the latest innovation in the PUMA family of products. Now, PUMA XL takes its place alongside PUMA One-Coat to ensure that Conklin contractors can deliver a superior roofing solution for every customer need.

Expand your business territory with the PUMA family of products and bring more dollars to your bottom line!

PUMA is now...

Two kinds of FAST

PUMA One-Coat, the first one-coat roofing system on the market, goes on in a single coat, cutting application time in half.

PUMA XL requires less drying time than other two-coat systems, so that you can get the job done in less time.

Two kinds of TOUGH

PUMA One-Coat has three times more erosion resistance than ordinary acrylic roofing, resulting in fewer callbacks and excellent customer referrals.

PUMA XL delivers higher tensile strength and carries an unprecedented 18-year warranty, keeping your customers happy and protected for years beyond their expectations.

Two kinds of SMART

PUMA One-Coat saves you on labor, material, and shipping costs for the best possible profit margin.

PUMA XL tackles any job, because it can be applied over all substrates, so that no matter what the job, you can offer premium long-term protection to your customers.

...and still GREEN

Both PUMA products meet the environmental standards you've come to expect:

- Low VOC emissions
- Solvent-free clean-up
- LEED credit eligibility
- Adherence to regulatory standards for "green" building requirements
